

Motor Vehicle Facilities at KITS

KITS Motor Vehicle Apprentices receive hands-on training using a wealth of excellent, modern equipment to fit them for the tasks they will encounter in their workplaces.

IN THE WORKSHOPS

- Four ramps
 - Three two-poster (electrical hydraulic)
 - One four poster MOT testing ramp with centre jack and emission testing – with extraction and headlamp beam setter
- Clean area where we can strip things down with engine stands and lifting equipment - indeed the whole workshop is clean area to work in.
- Diagnostics: We have the latest Sykes & Pickervant diagnostic kit reader along with portable oscilloscopes – for fault finding
- CAN BUS systems on electrics (for loose wiring systems)
- Pneumatic tyre removal and fitting machine
- Plus electronic wheel balance
- Plus puncture repairs
- Plus valeting equipment
- Plus schematic wiring test regulator

Working closely with the schools higher international level three (14+) regulators, we will be introducing diplomas for schools

IN THE CLASSROOM

We offer

- Autodata - a computer program that learners access to find relevant information and are taught where to look for compliance data; it also illustrates how to put the information into practice, for instance setting equipment for compliance purposes.
- CDX learning system
- Automotive technician training (DVP)

There are extensive ICT facilities and Internet access for the latest in interactive on-line training

- Plus each learner has a printed work book and folder, a portfolio and a knowledge workbook which shows key skills and achievements.

Technical certificates are delivered within the programme up to level three.
